

EMPLOYEE SUCCESS STORY

Mike Sawicki
Sales Engineer

Mike joined Quantic Wenzel in 2018. After a long and successful career as a professional chef, a bout with cancer, and his first child on the way, he was seeking a significant lifestyle change. Mike had heard about Quantic Wenzel for years through his mother, Sandy, a long-time employee. From her he found out they were hiring and was encouraged to apply. A strong background in operations and management was enough to get his foot in the door despite limited experience with RF or electronics, and he joined Quantic Wenzel as Program Specialist for the Space group. In this role Mike had the opportunity to become intimately familiar with our products and practices as well as develop close relationships with customers and colleagues.

This experience laid the groundwork to eventually move into a project management role, which provided a close look at the joy and challenges of engineering development and the dedication required to remain state of the art and quietly the best.

Always curious about the other side of the mountain, it wasn't long before Mike took another step forward in his career, joining the business development team in a sales capacity. In this new sales role Mike helps our space customers solve their unique frequency source challenges by recommending our best suited RF/MW components and integrated microwave assemblies. Today, Mike continues to offer outstanding service and support to our customers with passion and commitment.

“Quantic Wenzel became a part of my life at just the right time for me and my family. I am immensely grateful for having been given a chance to be here, and also grateful for all the brilliant people in this building who have been so generous in sharing their time and knowledge.”
